Summary

Data Engineer with 3+ years of experience and an MS in Business Analytics and AI from UT Dallas. Skilled in designing data warehouses, building ETL pipelines, optimizing SQL query performance, and enabling business insights. Technical expertise spans SQL, Python, AWS, Snowflake, dbt and Power BI.

Skills

Programming: SQL, NoSQL, Python, PySpark, R
Data Engineering: Snowflake, AWS, Azure Fabric, dbt, Hadoop, Spark, SSIS, ETL, CI/CD, Data Modeling, Claude Code
BI & Analytics: Tableau, Power BI, Data Analytics, Hypothesis Testing, Statistical Modeling, Machine Learning, Excel
Collaboration: Stakeholder Communication, GitHub, Confluence, JIRA, Agile Methodology

Experience

Data & AI Engineer | FBS Group - *McKinney, TX, USA* July. 2026 – Present

- **Lead data operations** in building a retirement solutions platform from zero to one, leveraging AWS services (S3, RDS, IAM, KMS, DynamoDB, Lambda, and Bedrock).
- **Translated business requirements into data models** for structured and unstructured data, and architected secure, tenant-isolated PII storage across Dev, UAT, and Production environments to enforce data segregation.
- Integrated Altruist APIs and **automated account position and transaction data ingestion** using Temporal orchestration, to **enable insights** into account performance for clients.

Data Engineer | IQVIA - *Bangalore, India* Aug. 2021 – Jun 2024

- Generated **$3M** in revenue by leading database operations and supporting a medical device sales reporting project.
- Optimized ETL pipelines handling up to **2TB** of data from multiple sources using **SQL script optimization** techniques.
- Achieved a **60.53%** reduction in run-time (38h → 15h) by migrating a big data ETL pipeline from SSIS to Hadoop.
- Saved **30 minutes** per run by automating a critical ETL workflow for recurring activities.
- Managed **3 large-scale medical projects** and **resolved data accuracy** and **ETL pipeline issues** on production and development servers.
- Communicated with stakeholders to understand requirements and developed ETL pipelines that **supported business needs.**

Projects

Customer Churn Analysis – FleetPride

- **Developed a predictive churn model** (XGBoost, 0.85 AUC-ROC) and an interactive **Power BI** dashboard, that enabled FleetPride branch managers to leverage transactional insights and targeted outreach lists to **prioritize at-risk account retention.**

Research

Evaluating AI Creativity and Reasoning Through Gamification (https://tinyurl.com/3awc9t2w)

- Analyzed performance metrics from simulated results of the game '**Codenames'** between two LLM models - GPT 4 and Gemini 2.5 and evaluated their creativity and reasoning.

Education

University of Texas at Dallas Richardson, TX
Master of Science, *Business Analytics and Artificial Intelligence* ***(3.92 GPA)*** *Aug. 2024 - May 2026*
President, Envision (Data Visualization Club); Nash Leader

R.V. College of Engineering Bangalore, India
Bachelor of Engineering, *Industrial Engineering and Management* *Aug. 2017 - July 2021*
